ClassicCarWiring (CCW) is pleased to announce the availability of its full color laminated wiring diagrams for classic American cars & trucks! In an effort to bring those dirty old wiring schematics that you need a magnifying glass and an engineering degree to decipher into the 21<sup>st</sup> Century, CCW has cleaned up, reformatted, computerized and colorized them. Born out of the frustration and the fear of dealing with restoring an old cars wiring system, their goal is to make your life a little easier. Founded in 2001 by John Anastasio, CCW currently has over 300 different car and truck schematics available and are adding more each week. You may have seen them on ebay or at a local show. If you haven't, you don't know what you're missing!

All color codes and information is taken directly from the old factory, aftermarket, shop & repair manuals. All diagrams are shipped pre-laminated and ready to use. Grease, oil, whatever: wipe it off when you're done and hang it back on your wall (Makes a really neat piece of art...we swear!) Most of their basic diagrams are \$19.95 or less and additional information is available for those extra options that you may have. They even offer a large 11X17 size that is a snap to read. So if your current or next project car or truck needs a little help getting it's wires uncrossed give them a call and get color!

You don't have an excuse to drive around without heat or lights anymore!

ClassicCarWiring can be reached at:

20 Kentview Dr

Carmel, NY 10512
